## $\underbrace{5}_{8}$

## DIVIDER <br> \& ROUNDER

## GENERAL FEATURES

Perfect shape: machines that cut a piece of raw dough into small portions and, using an oscillating plate, subsequently roll each piece to obtain balls of the same weight and shape, all in a few seconds

New safety features that further enhance
the overall performance our machines. They are designed to prevent hazards in daily operations, without hindering nor slowing down the work itself

Automatic version: hydraulic machine, with two cylinders for pressing, one cylinder for cutting and one for rounding. Control panel that allows adjustment of pressing, rounding and shaping chamber opening times. Knife cleaning button. Can store up to 9 different programs

M machine. The step of pressing, cutting and end rounding is carried out with the levers of the forming chamber while the adjustment is made by means of a yoke with a numerical scale
